The development of Books Utilization Measurement and Security System

Tzu-Heng Chiu
Professor & Associate director, Taipei Medical University Library
Chairperson, Medical Library Committee, LAROC(Taiwan)

Chun-Yi Wang
System librarian, Taipei Medical University Library
Member, Library Automation and Networking Committee, LAROC (Taiwan)

Shu-Yuan Siao
Division head, Taipei Medical University Library
Secretary , Medical Library Committee, LAROC (Taiwan)

Where are we from?

Taipei Medical University Library

Established in 1962
6,000+ students
500+ faculty

3,300 m^2
600 + seats
90 + public PCs

15,000+ volumes of books
80,000+ e-books
15,000+ e-journals
110+ databases

CAUSE

- With the idea of dormitory learning commons, Taipei Medical University Dormitory Management Group established Mu-Shan learning commons in the basement of the dormitory.
- Furthermore, with the support from Taipei Medical University Library, Mu-Shan learning commons provides students with thousands of books and tens of magazines from diverse subjects.
- However, we still need to trace the utilization rate and make sure that all the items won't be taking away.

DESIGN

- This system is designed by the staff of the TMUL, and gets the Taiwan patent.
- We install infrared counter onto the book shelves; therefore, the system will count up when users grab the book from the shelf.
- With a matching list in the database, we then apply RFID tag on every item, gadget and furniture, which suggests that no items could be taken away without being noticed.
- Furthermore, with the patented Un-gated Security System, there'll be warning alarm and photo-taking strategy when an item is taken away. Meanwhile, the photo and the list of lost item will be presented on the computer.

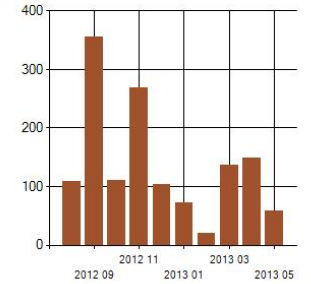
2012 11	761
2012 12	741

書架B區使用人次統計



查詢時間範圍 (自2012/5/1起)

2012/5/1 ~ 2013/5/5

依目前設定時間查詢

month	total
2012 08	108
2012 09	355
2012 10	110
2012 11	268
2012 12	103

OUTCOME

- This design allows librarians to find out the utilization rate of collection and each area without practical supervision and to control the learning commons remotely.
- We hope that it could be applied to every college learning commons in Taipei Medical University.

Q & A?
